👤 PROFILE

Frontend Developer with strong skills in React and web development. Experienced in building responsive, user-friendly websites and web applications. Passionate about creating great user experiences and solving problems through clean, efficient code.

🧠 SKILLS

- Html
- CSS
- Javascript
- Python
- REACT
- Next.js
- Typescript
- Git & Github
- Node.js
- Sass

📁 PROJECTS

Frontend Chat Application with Google Generative AI Integration ⧉
Built an interactive chat app using the Google Generative AI API to generate real-time responses based on user input.
- Used React's useState and useContext hooks to manage data and handle user interactions across components.
- Added custom animations and a typing indicator to enhance user experience with real-time feedback on AI responses.
- Created an intuitive sidebar with recent chats, quick access, and expandable options for easy navigation.

Crypto Dashboard Application ⧉
Built a responsive cryptocurrency dashboard in React that displays real-time data on prices, market cap, and trends.
- Used the CoinGecko API and React hooks to fetch and display up-to-date cryptocurrency information based on user preferences.
- Created interactive data visualizations like a custom Line Chart to show cryptocurrency price trends.
- Implemented navigation and search features using React Router for easy filtering and exploring of individual currencies.

Weather Application with Real-Time API Integration ⧉
Built a weather app in React that fetches real-time data from the OpenWeather API, showing temperature, humidity, and wind speed for user-selected cities.
- Used custom weather icons based on API codes to improve visual appeal and user experience.
- Implemented input validation to alert users if a city name is missing, preventing errors during API calls.
- Optimized search input with useRef and used useEffect to display weather data for a default city when the app loads.

🎓 EDUCATION

03/2016 – 05/2023   **Geography and Planning Sciences**
Adekunle Ajasin University
